

Daiana Birmanova

d.birmanova@uni.minerva.edu | birmohito.github.io/DesignPortfolio

Education

Minerva University

Bachelor of Science, Cognition, Brain and Behavior; Minor in Neuroscience

San Francisco, CA

May 2027

Brand & Graphic Design course | Design Express University | Remote | 2024

- Developed cohesive visual identities, including logos, typography, color palettes, patterns, and brand symbols.
- Designed packaging, social media assets, print materials, and high-fidelity mockups to ensure consistent brand expression across platforms.
- Gained hands-on experience with Adobe Creative Suite (Illustrator, Photoshop) and Figma to execute professional-quality deliverables, culminating in a comprehensive mockup project for a lingerie brand.

Projects

Joyous Chat | Capstone

Product Designer and Researcher

San Francisco, CA

2023 - 2024 (team); 2025 - Present (independent)

- Designed a journaling product end-to-end across two phases, owning problem framing, information architecture, interaction and visual design, and prototyping.
- Ran 60+ moderated usability sessions on the phase-one prototype and translated findings into design requirements.
- Relunched the project independently, repositioning it from a therapeutic AI mental health support app to a habit-building journaling product.
- Redesigned onboarding around the barrier users reported (no time, nothing to write about, momentum lost after a few days) rather than a personality type inferred for them: Big Five → declared inputs users select and can correct.
- Built a working prototype with Claude and hosted it on GitHub so participants could test asynchronously in their own browsers, which let me run 40 runs of flow testing without scheduling a single session.
- Designed in-app accessibility controls: high contrast mode, theme switching, and a three-step text size scale. o Readability is set by the user rather than assumed
- Use AI-assisted implementation to wire an LLM into the live prototype, so the prompt logic can be tested against the barrier each user selects at onboarding rather than being validated on static screens.

PScience.intnl

Founder

Kazakhstan

2022-2023

- Founded and co-designed a psychology education platform reaching 30,000+ users across TikTok and Instagram, building the visual system and content formats that carried it across wider Central Asia.
- Defined the audience and its unmet needs, then led a 20-person team of researchers, writers, and designers to deliver against it.

Experience

Minerva University Psychology Lab

UX Research Assistant

San Francisco, CA

September 2025 - May 2026

- Co-designed and ran participant research studies on written material comprehension with various background noise, then analyzed results to identify performance patterns and develop explanatory hypotheses.
- Designed and specified participant-facing screens in Figma: instructions, task screens, and structured response capture, and piloted each version before live data collection, reducing measurement error and raising usable-response rate by 20%.
- Designed recruitment materials and visual assets in Adobe Illustrator, maintaining a consistent look across print and screen.
